03 Visual reference

04 Usage rules

- Use blue, orange and green — in that order — for KPIs and bar series, so a series keeps its colour across every chart.
- Use cyan, teal and pink for doughnut segments; yellow for a secondary comparison series such as a previous period or target.
- Colour carries meaning. Green means a positive status — don't colour every upward trend green.
- Keep cards white on the grey page, gridlines subtle (#EAECF0, horizontal only) and labels compact.
- Values stay in the text colour; let a swatch, bar or segment carry the data colour.
- Cards: 12px radius, 1px border, 16px gap between cards. Desktop frames are 1280px wide.
